

## **Masgutova Neurosensorimotor Reflex Integration (MNRI® Program)**

The MNRI® Program determines the integration state of the primary infant reflexes and targets the underlying sensory and motor connections of the impacted reflexes, and the subsequent developmental challenges with techniques developed by Dr. Svetlana Masgutova. Please refer to Dr. Masutova's website [masgutovamethod.com](http://masgutovamethod.com) for comprehensive information regarding her treatment techniques.

KidTherapy is invested in this profound approach for the children and families we serve here at KidTherapy. Our staff has been personally trained by Dr. Masgutova during our sponsorship of the following courses:

- MNRI® Dynamic and Postural Reflex Pattern Integration
- MNRI® Visual and Auditory Reflexes Integration
- MNRI® Tactile Integration

In addition, KidTherapy sponsored a 5 day family conference here in New Jersey in 2008. Additional training was received in MNRI® Neurostructural Reflex Integration. Our physical therapist, Nancy Morris, PT, has additional training in MNRI® Dysfunctional and Pathological Reflexes and personal experience as a parent attending family conferences in 2006 and 2008 and is pursuing certification as a Core Specialist.
